

How we accomplish our goal of supplying the best available forage varieties – Forage EXTRA

- 1 We begin by making a significant investment in research. As an independent seed company, we can search the world suppliers for the best genetics and most advanced technology.
- 2 Through independent testing we select improved varieties that perform at the top of the charts in feed value, palatability, digestibility and yield.
- 3 We have established relationships with leading seed producers to ensure quality seed with high purity and excellent germination. After our superior standards have been met, we retest the seed to make sure it exceeds those standards.
- 4 Individual varieties are then packaged in proprietary branded bags and shipped direct to our warehouse in Buffalo, NY.
- 5 Forage mixes are accurately blended in our production facility to be sure we meet the specific requirements of our discriminating customers.
- 6 These mixes are then packaged with the Forage EXTRA logo - proof that they have endured the rigorous test to be the best forage products available.

Whether in the pasture, field, silo, bunk or bale, the performance of these selected varieties will be unsurpassed.

FORAGE EXTRA

TOP PERFORMING FORAGE VARIETIES FOR THE NORTHEAST

We have developed the distinctive **Forage EXTRA** logo to identify top performing forage varieties for the Northeast dairy and livestock farmer.

Our goal continues to be supplying our customers with the best available forage varieties of all legume and grass species, both perennial and annual, that have the potential to produce top yields of high quality feed.

The designation **Forage EXTRA** placed on our selected varieties and mixes means they meet our demanding quality standards.
